Dactylorhiza cordigera

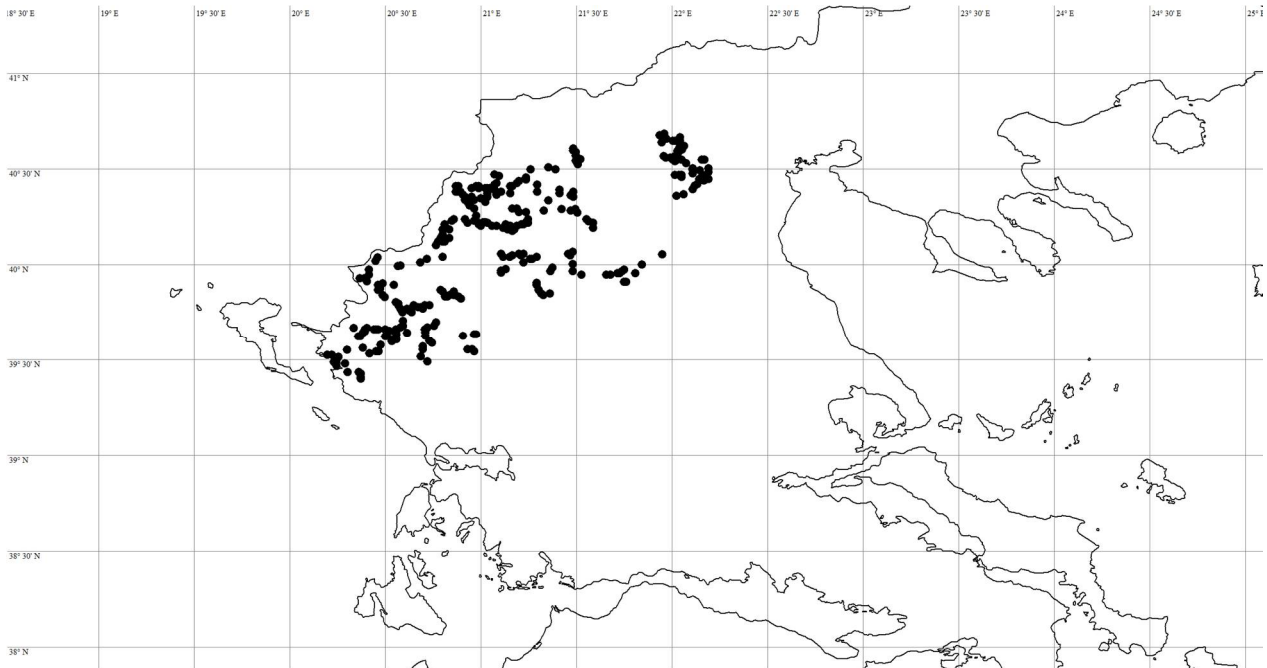

by Eckhard Willing

December 2016

Einführung

Im Jahr 1985 führen wir (Barbara Willing und Eckhard Willing) unsere *Dactylorhiza*-Studien vor Allem am Smolikas und am Grammos fort. Dabei überprüfen wir erfolgreich eine vorab aufgestellte Vermutung, dass alle nordgriechischen Bergmassive oberhalb von 1000 m über Vorkommen von *Dactylorhiza baumanniana*, *cordigera* und *kalopissii* verfügen und dass Populationen heterogener Erscheinungsformen aus der Hybridisierung der drei genannten Arten stammen.

Wie sich herausstellt, werden wir mehrere Populationen in den kommenden Jahren für detailliertere Untersuchungen besuchen.

Fundorte

GR, Thesprotia, 1,1 km SW Igoumenitsa, 29.04.1985 Phrygana, Ka, 10m The 82, 39°29'10"N, 20°14'39"E, DJ 37.51	The 82
