## 1. Einführung

Schon seit mehreren Jahren haben wir uns vorgenommen, noch einmal in den zentralen Teil des Süd-Pindus zu fahren. Die hohen Gebirgslagen sind ja von skandinavischen Botanikern gut untersucht. Die Tallagen und die Hänge bis 1500 m Höhe zeigen aber zum Teil deutliche Bearbeitungslücken. Wir selbst haben den nördlichen Teil des Süd-Pindus von Kastanea aus, den östlichen Teil von Trikala und Karditsa aus, den südöstlichen Teil im Rahmen einer Tour von Karditsa nach Karpenisi, und den südlichen Teil von Krendi aus besucht, aber bei weitem nicht abschließend bearbeitet. Der zentrale Teil war in den vergangenen Jahren nur schlecht durch akzeptable Straßen erschlossen.

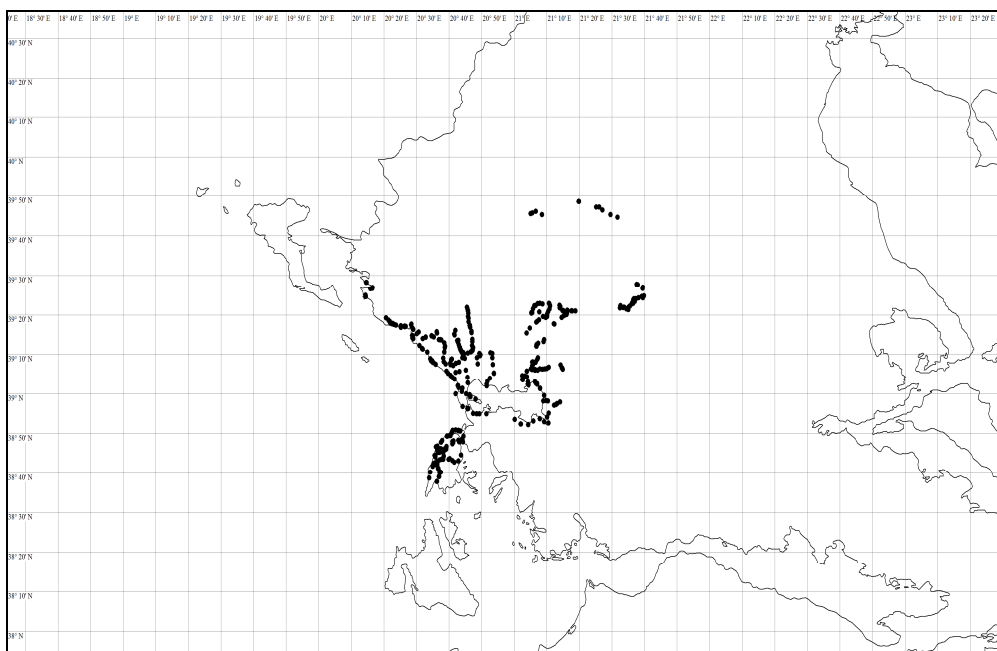

Im Jahr 2016 nun wollten wir uns von der Ionischen Küste aus die Hänge hinauf bis in die höheren Lagen vorarbeiten. Die ist uns nur unzureichend gelungen. Denn bei der Reisevorbereitung und im Gelände stellten wir fest, dass wir das Gebiet von Preveza, Arta und Lefkas zwar gut auf Orchideen untersucht, aber ansonsten nur im Herbst kartiert haben. Also haben wir etwas umgeplant und die küstennahen Regionen von Preveza und Arta und die Insel Lefkas ausführlicher besammelt, so dass für die höheren Lagen in Arta und Karditsa nur wenige Tage übrig blieben. Diese Planung erwies sich (zumindest) für uns als sehr erfolgreich, da die Blühbedingungen ausgesprochen gut waren. Die zentralen Gebiete des Süd-Pindus hoffen wir in den nächsten Jahren noch besuchen zu können.

Wir begannen die Reise am 18. April 2016 in Igoumenitsa, hielten uns bis zum 10. Mai 2016 in Preveza, Arta und Etolia-Akarnania nördlich und rings um den Golf von Amvrakia auf, waren vom 11.-17. Mai 2016 auf Lefkas und fuhren dann in ausgewählte Gebiete des Süd-Pindus in Arta, Trikala und Karditsa. Während der Rückreise von Pyli nach Igoumenitsa haben wir nur die Pflanzen gesammelt, die wir auch fotografiert haben.

Wie im vergangenen Jahr haben wir noch konsequenter Pflanzen fotografiert. Leider waren wir auch in diesem Jahr nicht immer konsequent genug, so dass für einige interessante Pflanzen keine Fotos vorliegen. Für alle fotografierten Arten gibt es vom Fundort Herbarbelege. Ausgewählte Bilder sind auf der Homepage [www.willing-botanik.de](http://www.willing-botanik.de) einzusehen. Das gesamte Bildmaterial wird vielleicht/hoffentlich später in das Virtuelle Herbar Jacq eingefügt werden. Bei Bedarf, vor allem für wissenschaftliche Zwecke, sind wir natürlich bereit Originalbilder im jpg-Format oder komprimiert für Dokumente abzugeben.

Insgesamt haben wir 9.950 Pflanzen an 351 Fundstellen gesammelt und 785 eindeutig zuzuordnende Arten notiert.

Unsere Reiseroute und die bearbeiteten Fundstellen zeigt Fig.1:

Auch diese Sammelreise einschließlich der Aufarbeitung der gesammelten Pflanzen wurde ohne Unterstützung von uns selbst finanziert.

Im Jahresbericht 2014 schrieben wir: "Nicht gerade motivierend ist es dagegen, wenn in einer ausgesprochen hilfreichen Publikation des Botanischen Garten und Botanischen Museum Berlin-Dahlem nicht nur die Autoren des Herbarium Willing unzulänglich zitiert werden, sondern auch Botaniker unsere Belege als ihren eigenen Beitrag ausweisen. Im Privatleben nennt man das „sich mit fremden Federn schmücken“, in einer wissenschaftlichen Publikation ansonsten hoher Qualität müsste man ein solches Vorgehen deutlich anders nennen." Nach einem Jahr müssen wir feststellen, dass sich die Autoren des Textes in Vascular Plants of Greece, Kapitel Acknowledgements pg. 13 weder entschuldigt noch den Text korrigiert haben. Es stellt sich die Frage, ob dies mit guter wissenschaftlicher Praxis vereinbar ist. Leider haben sich Autoren und Herausgeber bis heute nicht geäußert. Das Supplement zu den Vascular Plants of Greece enthält immerhin eine sehr freundliche Erwähnung unseres Beitrages zur Flora Hellenica.

## **2. Fundorte**
