Beobachtungen in Dessau-Roßlau und seiner weiteren Umgebung,  
in der Region Saale-Unstrut und im Harz  
im Jahr 2020

# 1. Einführung

Für das Jahr 2020 hatten meine Frau und ich eine sechswöchige Sammelreise nach Thessalien in Griechenland geplant. Dies war wegen Corona-Virus weder im Mai-Juni noch im September-Oktober möglich. So mussten wir umplanen. Meine Frau konnte sich erstmals das ganze Jahr um den eigenen Garten kümmern, und ich konnte mich in aller Ruhe der Pflanzenwelt von Dessau und Umgebung widmen. Beides war in den letzten Jahren etwas zu kurz gekommen.

Bei meiner Routenplanung habe ich mich von Folgendem leiten lassen:

- Gebiete bzw. Quadranten, in denen ich schon mehrfach kartiert habe, habe ich weitgehend ausgelassen.
- Im Wesentlichen habe ich für mich neue Gegenden bzw. Quadranten besucht. Auch eine Art, über die Pflanzen die nicht mehr ganz neue Heimat kennenzulernen.
- Im Spätsommer habe ich mich etwas auf Dorfteiche und auf Bergbaufolge-Seen konzentriert.
- An allen Fundstellen habe ich – unabhängig von den von anderen Floristen gemachten Beobachtungen – alle Arten notiert, mich also nicht auf „Spezialitäten“ konzentriert. Dadurch sind aber „gewöhnliche“ Arten überrepräsentiert.
- Alle mir interessant erscheinenden Pflanzen bzw. Arten habe ich photographiert, einzelne Arten mehrfach. Dabei erschien mir vor Allem die Vielfältigkeit der einzelnen Arten wichtig.
- Nur eingeschränkt habe ich gesammelt und herbarisiert. Das lag daran, daß ich immer noch im Unklaren bin, ob es in Sachsen-Anhalt überhaupt ein Interesse an Herbarbelegen gibt.

Insgesamt habe ich 1.480 Pflanzen als Herbarbelege gesammelt. Zum Vergleich: In der gleichen Zeit hätte ich in Griechenland 16.000 bis 20.000 Belege gesammelt. Das hat auch seinen guten Grund: Für die Flora von Griechenland (früher Flora Hellenica) gelten nur Herbarbelege als belastbares Grundlagenmaterial. Als ich vor mehreren Jahren in Abstimmung mit Fachkollegen aus Kopenhagen und Berlin begann, ausgewählte Arten nur zu notieren, erhielt ich prompt die Antwort, dies sei aber „nicht wissenschaftlich“.

Die Herbarbelege sind montiert, bestimmt, etikettiert und dem Botanischen Museum Berlin-Dahlem zum dauerhaften Verbleib übergeben worden.

Die Pflanzenphotos sind zum Teil in [www.willing-botanik.de](http://www.willing-botanik.de) eingefügt. Die überwiegende Zahl der Photos ist im jpg-Format dem Botanischen Verein Sachsen-Anhalt für seine Bild-Datenbank übergeben worden. Entsprechend werden etwa 35.000 Pflanzenphotos im jpg-Format der Griechischen Gesellschaft für Botanik übergeben werden.

Die zu den Herbarbelegen gehörenden Photos sind ebenfalls dem Botanischen Museum Berlin-Dahlem übergeben worden und sollen gemeinsam mit diesen in das Virtuelle Herbar Jacq [herbarium.univie.ac.at](http://herbarium.univie.ac.at) eingefügt werden.

Insgesamt habe ich etwa 800 Fundstellen besucht, diejenigen im Saale-Unstrut-Gebiet und im Harz gemeinsam und einige im Gebiet um Dessau mit meiner Frau. Die Verteilung der Fundstellen auf die Topographischen Karten ist folgender Tabelle zu entnehmen:
